	<input type="checkbox"/> Equipment Storage
	<input checked="" type="checkbox"/> Material Storage List Materials <u>Conductors, Towers</u>
	<input checked="" type="checkbox"/> Other (Please List) <u>Pulling and tensioning sites at points of inflection, and approximately every 2-3 miles along the line.</u> (See notes below)

2. TERM OF USE

NUMBER OF MONTHS EASEMENT IS REQUIRED:	TBD Months (See current Project schedule, Exhibit D to application Narrative)	PROPOSED START DATE FOR CONSTRUCTION EASEMENT:	TBD (See current Project schedule, Exhibit D to application Narrative)
---	---	---	--

A pulling and tensioning site will be needed at the end of every point of inflection (where the transmission line makes an angle change). These site will be approximately 200' wide, and 400' to 600' long, as illustrated in the sketch below. Additional pulling and tensioning sites will need to occur along straight portions of the line, approximately every 2-3 miles. Typically, these will be inside of the requested 225' wide transmission line ROW, but there may be instances where they will need to be positioned partially outside of the transmission line ROW. These details will be determined as the Project Plan of Development (POD) is developed. (See the POD list of contents and anticipated schedule attached to the Project Narrative as Exhibits B and C.)
